EXCEPTION HANDLER IN JAVA

Excepiton: In Java, an exception is an event that disrupts the normal flow of the program. It is an object which is thrown at runtime.

Exception hadnling: The Exception Handling in Java is one of the powerful mechanism to handle the runtime errors so that normal flow of the application can be maintained.

Exception Handling is a mechanism to handle runtime errors such as ClassNotFoundException, IOException, SQLException, RemoteException, etc.

Example for exception handling in Java:

```
public class JavaExceptionExample{
  public static void main(String args[])
  {
   int a = 10;
   try
   {
      int z= a/0;
   }

   catch(ArithmeticException e)
   {
       System.out.println(e);}
   }
  }
```

Types of Java Exceptions:

1. Checked Exception
2. Unchecked Exception

1. Checked Exception: The classes which directly inherit Throwable class except RuntimeException and Error are known as checked exceptions e.g. IOException..
Checked exceptions are checked at compile-time.
2. Unchecked Exception: The classes which inherit RuntimeException are known as unchecked exceptions e.g. ArithmeticException, ArrayIndexOutOfBoundsException etc. Unchecked exceptions are not checked at compile-time, but they are checked at runtime.

Java exception keywords:

1. try
2. catch
3. fanally
4. throw
5. throws
